**Supplemental Material, Figure S1. Population for analysis.**

**Supplemental Material, Table S1. Distribution of PM<sub>10</sub> and NO<sub>2</sub> exposure levels for different periods<sup>a</sup>.**

	Minimum	25th percentile	Mean	Median	75th percentile	Maximum
<b>Early pregnancy</b>						
<b>PM<sub>10</sub> exposure (µg/m<sup>3</sup>)</b>						
Prior day 1-7	16.3	24.6	30.6	28.8	33.9	66.2
Prior day 1-14	18.8	25.4	30.6	28.8	33.7	58.0
Prior day 1-28	20.2	26.3	30.6	29.4	33.8	49.5
<b>NO<sub>2</sub> exposure (µg/m<sup>3</sup>)</b>						
Prior day 1-7	16.6	33.9	40.3	39.9	46.0	73.5
Prior day 1-14	16.9	35.2	40.4	40.5	45.3	67.4
Prior day 1-28	19.8	35.8	40.4	40.8	44.5	65.5
<b>Delivery</b>						
<b>PM<sub>10</sub> exposure (µg/m<sup>3</sup>)</b>						
Prior day 1-7	15.2	23.9	29.6	27.7	32.8	62.5
Prior day 1-14	16.9	24.7	29.5	28.0	32.1	53.6
Prior day 1-28	20.1	25.6	29.6	28.5	32.8	44.5
Total pregnancy	23.2	27.8	30.3	30.0	32.9	40.9
<b>NO<sub>2</sub> exposure (µg/m<sup>3</sup>)</b>						
Prior day 1-7	13.0	33.2	39.5	39.3	45.6	69.1
Prior day 1-14	15.3	34.1	39.5	39.8	44.7	67.2
Prior day 1-28	17.6	34.7	39.5	40.2	44.1	62.8
Total pregnancy	26.5	37.2	39.9	39.6	42.3	56.9

<sup>a</sup> Air pollution exposure was estimated for different periods preceding blood sampling: one week (day 1-7), two weeks (day 1-14), and four weeks (day 1-28). Additionally, exposure was estimated for the total pregnancy period (conception until delivery).

**Supplemental Material, Table S2. Unadjusted and adjusted percentage changes in maternal C-reactive protein levels in early pregnancy for an interquartile range increase in maternal air pollution exposure (N=5067).**

	IQR ( $\mu\text{g}/\text{m}^3$ )	N <sup>a</sup>	Maternal CRP levels Unadjusted percentage change <sup>b</sup> (95% range)	Maternal CRP levels Adjusted percentage change <sup>c</sup> (95% range)
<b>PM<sub>10</sub></b>				
Day 1-7	9.23	5057	0.0 (-2.7, 2.6)	0.9 (-1.6, 3.4)
Day 1-14	8.32	5057	-2.1 (-5.0, 0.6)	-1.1 (-3.8, 1.6)
Day 1-28	7.45	5037	-1.8 (-5.1, 1.5)	0.3 (-2.9, 3.6)
<b>NO<sub>2</sub></b>				
Day 1-7	12.11	5065	-0.9 (-4.4, 2.5)	0.4 (-3.1, 3.9)
Day 1-14	10.07	5057	-1.3 (-4.6, 2.1)	-0.4 (-4.1, 3.3)
Day 1-28	8.69	5047	-1.2 (-4.5, 2.2)	-0.4 (-4.4, 3.6)

Values are log-transformed regression coefficients and reflect the percent change (95% range) in maternal CRP levels in early pregnancy per interquartile range increase in air pollution exposure in different periods preceding the first trimester measurement.

<sup>a</sup> Differences in the number of subjects are due to missing air pollution data for the specific periods.

<sup>b</sup> Models are adjusted for gestational age at measurement.

<sup>c</sup> Models are adjusted for gestational age at measurement, maternal age, body mass index, parity, ethnicity, education, smoking, alcohol consumption, noise exposure, and season of conception.

**Supplemental Material, Table S3. Unadjusted associations of maternal air pollution exposure with the risk of elevated maternal C-reactive protein levels in early pregnancy (N=5067).**

	<b>Risk of elevated maternal CRP levels (&gt;8 mg/L) per PM<sub>10</sub> quartile Odds ratio (95% CI) (n of cases)</b>	<b>Risk of elevated maternal CRP levels (&gt;8 mg/L) per NO<sub>2</sub> quartile Odds ratio (95% CI) (n of cases)</b>

---

\* p < 0.05

‡ p < 0.10

Values are odds ratios (95% CI) and reflect the risk for elevated maternal C-reactive protein levels (>8 mg/L) for each quartile of air pollution exposure in different periods preceding the first trimester measurement as compared to the reference group (lowest quartile). Cut-off values for categorization of PM<sub>10</sub> exposure were <24.6, 24.6-28.8, 28.8-33.9, >33.9 µg/m<sup>3</sup> for the prior week, <25.4, 25.4-28.8, 28.8-33.7, >33.7 µg/m<sup>3</sup> for the prior two weeks, and <26.3, 26.3-29.4, 29.4-33.8, >33.8 µg/m<sup>3</sup> for the prior four weeks. Cut-off values for NO<sub>2</sub> exposure were <33.9, 33.9-39.9, 39.9-46.0, >46.0 µg/m<sup>3</sup> for the prior week, <35.2, 35.2-40.5, 40.5-45.3, >45.3 µg/m<sup>3</sup> for the prior two weeks, and <35.8, 35.8-40.8, 40.8-44.5, >44.5 µg/m<sup>3</sup> for the prior four weeks. Differences in the number of subjects are due to missing air pollution data for the specific periods. Models are adjusted for gestational age at measurement.

<sup>a</sup> Tests for trend were performed by including PM<sub>10</sub> and NO<sub>2</sub> exposure as a continuous term (per 10 µg/m<sup>3</sup> increase) in the model.

**Supplemental Material, Table S4. Unadjusted associations of maternal air pollution exposure with the risk of elevated fetal C-reactive protein levels at delivery (N=4450).**
