

**Note to readers with disabilities:** *EHP* strives to ensure that all journal content is accessible to all readers. However, some figures and Supplemental Material published in *EHP* articles may not conform to [508 standards](#) due to the complexity of the information being presented. If you need assistance accessing journal content, please contact [ehp508@niehs.nih.gov](mailto:ehp508@niehs.nih.gov). Our staff will work with you to assess and meet your accessibility needs within 3 working days.

## **Supplemental Material**

### **Urban and Transport Planning Related Exposures and Mortality: A Health Impact Assessment for Cities**

Natalie Mueller, David Rojas-Rueda, Xavier Basagaña, Marta Cirach, Tom Cole-Hunter, Payam Dadvand, David Donaire-Gonzalez, Maria Foraster, Mireia Gascon, David Martinez, Cathryn Tonne, Margarita Triguero-Mas, Antònia Valentín, and Mark Nieuwenhuijsen

#### **Table of Contents**

##### **Supplemental Material A. UTOPIA**

**Table S1.** Barcelona natural all-cause mortality rate for population  $\geq 20$  years in 2012

**Table S2.** Risk estimates for all-cause mortality by exposure domain

##### **Supplemental Material B. Physical activity**

**Table S3.** Physical activity distribution of ‘insufficiently-active’ Barcelona Health Survey respondents 20-64 years (N=1,835)

**Table S4.** Physical activity distribution of ‘insufficiently-active’ Barcelona Health Survey respondents  $\geq 65$  years (N=643)

**Table S5.** Sensitivity analysis. Linear exposure response function for physical activity and mortality

**Table S6.** Sensitivity analysis. Physical activity distribution of ‘insufficiently-active’ Barcelona Health Survey respondents 20-64 years considering MET minutes/ week accumulated by walking (METs = 3)

**Table S7.** Sensitivity analysis. Physical activity distribution of ‘insufficiently-active’ Barcelona Health Survey respondents  $\geq 65$  years considering MET minutes/ week accumulated by walking (METs = 2.5)

**Table S8.** Sensitivity analysis. Estimated preventable deaths for physical activity considering MET minutes/ week accumulated by walking

#### **Supplemental Material C. Air pollution**

**Table S9.** Sensitivity analysis. Estimated preventable deaths under compliance with Interim-Target 3 of  $15 \mu\text{g}/\text{m}^3$   $\text{PM}_{2.5}$  as defined by WHO air quality guidelines

**Table S10.** Sensitivity analysis. Estimated preventable deaths under compliance with lowest measured  $\text{PM}_{2.5}$  level of  $5.8 \mu\text{g}/\text{m}^3$

#### **Supplemental Material D. Noise**

**Table S11.** All-cause mortality risks associated with traffic noise exposure levels

**Figure S1.** Exposure response function for traffic noise and all-cause mortality in Barcelona

**Table S12.** Self-reported noise annoyance available through Indicadores de Vulnerabilidad Urbana on census tract level

**Table S13.** Sensitivity analysis. Estimated attributable deaths to self-reported noise annoyance rate across census tracts

#### **Supplemental Material E. Heat**

**Table S14.** Minimum mortality temperature percentile of daily mean temperature for Barcelona (2009-2014)

**Table S15.** Estimated mortality impact of exceeding the 74<sup>th</sup> daily mean temperature percentile after decreasing urban temperatures  $4^\circ\text{C}$

**Table S16.** Sensitivity analysis. Estimated mortality impact of exceeding the 74<sup>th</sup> daily mean temperature percentile after decreasing urban temperatures  $1^\circ\text{C}$

#### **Supplemental Material F. Green spaces**

**Table S17.** Correlation of %GS of the census tracts and Barcelona Health Survey respondents living within 300 m linear distance to a green space of  $\geq 0.5\text{ha}$

**Figure S2.** Logarithmic function between %GS and the proportion of Barcelona residents with access to a green space  $\geq 0.5$  ha within 300 m linear distance

**Table S18.** Necessary increase in %GS for each quintile in order to provide universal access to a green space  $\geq 0.5$  ha within 300 m linear distance
