Long-Term Ambient Residential Traffic–Related Exposures and Measurement Error–Adjusted Risk of Incident Lung Cancer in the Netherlands Cohort Study on Diet and Cancer
Jaime E. Hart, Donna Spiegelman, Rob Beelen, Gerard Hoek, Bert Brunekreef, Leo J. Schouten, and Piet van den Brandt

Table S1: Associations of Increases in Black Smoke, NO2, or PM2.5 Exposures or Baseline Address Traffic Measures with Incident Lung Cancer 1986-2003 Overall and by Subtype; Sensitivity Models Adjusted only for Covariates that Change Effect Estimates by 10% or More (Parsimonious) and Multivariable Models Additionally Adjusted for Clustering by COROP Area.

Table S2: Literature Summary of Associations of PM2.5 and Lung-Cancer Calculated for each 10 µg/m³ Increase and Presented in Increasing Hazard Ratio Order.

Table S3: Literature Summary of Associations of NO2 and Lung-Cancer per 30 µg/m³ Increase and Presented in Increasing Hazard Ratio Order.
