Supplemental Material

Prenatal Exposure to Phthalates and Childhood Body Size in an Urban Cohort

Table of Contents

Table S1. Descriptive statistics and correlations of between maternal urinary phthalate metabolite concentrations.

Table S3. Rotated component loading weights for phthalate urinary metabolite concentrations for women ages 15 to 45 in NHANES 2003-2004.

Figure S1. Cohort follow-up. Figure S1 depicts follow-up of the birth cohort to ages 3, 5 and 7. Sample sizes in boxes attached to arrows reflect the number of children followed from each follow-up point to a subsequent follow-up point. Sample sizes in circles reflect the number of children lost to follow-up after a specific follow-up point.

Figure S2. Component plot for principal component analysis of CCCEH maternal urinary phthalate metabolites concentrations.
