Note to readers with disabilities: *EHP* strives to ensure that all journal content is accessible to all readers. However, some figures and Supplemental Material published in *EHP* articles may not conform to 508 standards due to the complexity of the information being presented. If you need assistance accessing journal content, please contact ehp508@niehs.nih.gov. Our staff will work with you to assess and meet your accessibility needs within 3 working days.

Supplemental Material

Exposure to Traffic-Related Air Pollution in Relation to Progression in Physical Disability among Older Adults

Jennifer Weuve, Joel D. Kaufman, Adam A. Szpiro, Cynthia Curl, Robin C. Puett, Todd Beck, Denis A. Evans, and Carlos F. Mendes de Leon

Table of Contents

Computation of area-level socioeconomic status

Table S1. Adjusted differences (and 95% confidence interval [CI]) in 5-year change in physical performance by exposure to traffic-related air pollution: results from additional sensitivity analyses.

Table S2. Distribution of baseline residential distances to major road.

Table S3. Participant characteristics by category of distance to census class A3 road at baseline

Figure S1. Differences in baseline and 5-year change in physical performance score with higher long-term NO\textsubscript{X} exposure: results with and without multivariable adjustment and weighting.

Figure S2. Model-based estimated trajectory in physical performance, by quartile of long-term exposure to ambient oxides of nitrogen (NO\textsubscript{X})

Figure S3. Adjusted difference (95% confidence interval [CI]) in baseline physical performance score, by residential distance to census feature class A3 road (N=9994)
