Note to readers with disabilities: EHP strives to ensure that all journal content is accessible to all readers. However, some figures and Supplemental Material published in EHP articles may not conform to 508 standards due to the complexity of the information being presented. If you need assistance accessing journal content, please contact ehp508@niehs.nih.gov. Our staff will work with you to assess and meet your accessibility needs within 3 working days.

Supplemental Material

Polybrominated Diphenyl Ethers in Human Milk and Serum from the US EPA MAMA Study: Modeled Predictions of Infant Exposure and Considerations for Risk Assessment

Satori A. Marchitti, Suzanne E. Fenton, Pauline Mendola, John F. Kenneke, and Erin P. Hines

Table of Contents

First Visit Questionnaire, U.S. EPA MAMA Study

Table S1. Spearman correlation between maternal age and BFR concentrations
Table S2. Spearman correlation between vehicle age and BFR concentrations
Table S3. Spearman correlation between home age and BFR concentrations
Figure S1. Predicted milk BFR concentrations vs. observed MAMA Study milk concentrations
