Supplemental Material

Prenatal Residential Proximity to Agricultural Pesticide Use and IQ in 7-Year-Old Children

Robert B. Gunier, Asa Bradman, Kim G. Harley, Katherine Kogut, and Brenda Eskenazi

Table of Contents

Table S1. Pesticide use (kg) in Monterey County in 2000, relative potency factors and toxicity-weighted pesticide use.

Table S2. Correlation coefficients between agricultural use (kg) of neurotoxic pesticide groups within one kilometer of maternal residence during pregnancy (n=283).

Table S3. Adjusted association between a standard deviation increase in pesticide use (kg) within one kilometer of maternal residence during pregnancy and Full-Scale IQ at 7-years of age (n=255) from multiple pesticide models.
