Supplemental Material

Plasma Perfluoroalkyl and Polyfluoroalkyl Substances Concentration and Menstrual Cycle Characteristics in Preconception Women

Wei Zhou, Lulu Zhang, Chuanliang Tong, Fang Fang, Shasha Zhao, Ying Tian, Yexuan Tao, and Jun Zhang, for the Shanghai Birth Cohort Study

Table of Contents

Table S1. Characteristics of the study population (n=950) and preconception women without PFASs levels (n=232) in Shanghai, China, 2013-2015.

Table S2. Associations between PFASs (ng/mL) and irregular cycles in preconception women in Shanghai, China, 2013-2015.

Table S3. Associations between PFASs (ng/mL) and long cycles in preconception women in Shanghai, China, 2013-2015.

Table S4. Associations between PFASs (ng/mL) and short cycles in preconception women in Shanghai, China, 2013-2015.

Table S5. Associations between PFASs (ng/mL) and menorrhagia in preconception women in Shanghai, China, 2013-2015.

Table S6. Associations between PFASs (ng/mL) and hypomenorrhea in preconception women in Shanghai, China, 2013-2015.
