Note to readers with disabilities: EHP strives to ensure that all journal content is accessible to all readers. However, some figures and Supplemental Material published in EHP articles may not conform to 508 standards due to the complexity of the information being presented. If you need assistance accessing journal content, please contact ehponline@niehs.nih.gov. Our staff will work with you to assess and meet your accessibility needs within 3 working days.

Supplemental Material

Environmental Exposures to Lead, Mercury, and Cadmium and Hearing Loss in Adults and Adolescents: KNHANES 2010-2012

Yoon-Hyeong Choi and Sung Kyun Park

Table of Contents

Study Population

Table S1. ORs (95% CIs) of hearing loss (>25dB) by blood lead, mercury, and cadmium levels in adults (n=5,187)
Table S2. Change (95% CIs) in hearing thresholds (dB) by blood lead, mercury, and cadmium levels in adults (n=5,187)
Table S3. ORs (95% CIs) of hearing loss (>15dB) by blood lead, mercury, and cadmium levels in adolescents (n=853)
Table S4. Change (95% CIs) in hearing thresholds (dB) by blood lead, mercury, and cadmium levels in adolescents (n=853)
Table S5. ORs (95% CIs) of hearing loss (>25dB) by blood lead, mercury, and cadmium levels stratified by adult age groups at single-pollutant models in adults (n=5,187)
Table S6. Urinary cotinine-adjusted ORs (95% CIs) of hearing loss (>25dB) by blood cadmium levels at single-pollutant models in adults (n=3,292)
Table S7. Fish intake-adjusted ORs (95% CIs) of hearing loss (>25dB) by blood mercury levels at single-pollutant models in adults (n=2,973)
Table S8. Cholesterol-adjusted ORs (95% CIs) of hearing loss (>25dB) by levels of blood lead, mercury, and cadmium at single-pollutant models in adults (n=5,187)

Table S9. Education-unadjusted ORs (95% CIs) of hearing loss (>25dB) by levels of blood lead, mercury, and cadmium at single-pollutant models in adults (n=5,187)
