Note to readers with disabilities: EHP strives to ensure that all journal content is accessible to all readers. However, some figures and Supplemental Material published in EHP articles may not conform to 508 standards due to the complexity of the information being presented. If you need assistance accessing journal content, please contact ehponline@niehs.nih.gov. Our staff will work with you to assess and meet your accessibility needs within 3 working days.

Supplemental Material

Levels and Determinants of DDT and DDE Exposure in the VHEMBE Cohort

Fraser W. Gaspar, Jonathan Chevrier, Lesliam Quirós-Alcalá, Jonah M. Lipsitt, Dana Barr, Nina Holland, Riana Bornman, and Brenda Eskenazi

Table of Contents

1. Quantification of $o,p'$ and $p,p'$-DDT and DDE Isomers
2. Quality Control Results for VHEMBE Serum Analysis
3. Additional Results

Table S1. Propensity score distributions for estimating $E(A|W)$ for assessing positivity violations.

Table S2. Algorithm weights used by SuperLearner to estimate $E(Y|A,W)$

Table S3. Algorithm weights used by SuperLearner to estimate $E(A|W)$.

Table S4. $p,p'$-DDT and $p,p'$-DDE concentrations (ng/g-lipid) by selected characteristics in VHEMBE participants, Limpopo, South Africa.

Table S5. Comparison of VHEMBE lipid-adjusted serum concentrations with previously reported blood concentrations in adults living in IRS communities and pregnant women living in the United States

Figure S1. Directed Acyclical Graph (DAG) used to conceptualize the relationship between exposures and outcomes.

Figure S2. Spatial distribution of $p,p'$-DDE concentrations in relation to Tshilidzini Hospital
