However, some figures and Supplemental Material published in *EHP* articles may not conform to [508 standards](#) due to the complexity of the information being presented. If you need assistance accessing journal content, please contact ehponline@niehs.nih.gov. Our staff will work with you to assess and meet your accessibility needs within 3 working days.

Supplemental Material

A Longitudinal Analysis of the Influence of the Neighborhood Environment on Recreational Walking within the Neighborhood: Results from RESIDE

Hayley Christian, Matthew Knuiman, Mark Divitini, Sarah Foster, Paula Hooper, Bryan Boruff, Fiona Bull, and Billie Giles-Corti

Table of Contents

Table S1. Correlation between objectively measured attributes of the neighborhood environment and its corresponding perceived attribute of the neighborhood environment

Table S1: Correlation between objectively measured attributes of the neighborhood environment and its corresponding perceived attribute of the neighborhood environment

Objective measure	Perceived measure	Correlation coefficient			
		T1	T2	T3	T4
Connectivity z-score	Street connectivity	0.14	0.08	0.16	0.21
Residential density z-score	Not measured	-	-	-	-
Presence of small/pocket park 400m	Presence of a park within 5 mins	0.07	0.04	0.11	0.12
Presence of medium/large park 400m	Presence of a park within 5 mins	0.18	0.20	0.22	0.15
Presence of district park 1600m	Presence of a sports field within 15 mins	0.11	0.18	0.12	0.18
Presence of beach access 1600m	Presence of beach access within 15 mins	0.68	0.73	0.73	0.58
