Supplemental Material

Long-Term Exposure to Road Traffic Noise and Nitrogen Dioxide and Risk of Heart Failure: A Cohort Study

Mette Sørensen, Olav Wendelboe Nielsen, Ahmad Sajadieh, Matthias Ketzel, Anne Tjønneland, Kim Overvad, and Ole Raaschou-Nielsen

Table of Contents

Table S1. Baseline characteristics of the Diet, Cancer and Health cohort by heart failure status among men and women

Table S2. Baseline characteristics of the Diet, Cancer and Health cohort by baseline exposure to air pollution and road traffic noise above and below the median

Table S3. Baseline characteristics of the Diet, Cancer and Health cohort by median exposure to air pollution (NO₂) among men and women

Table S4. Baseline characteristics of the Diet, Cancer and Health cohort by median exposure to road traffic noise (L_{den}) among men and women

Table S5. Association between 10-years residential exposure (categorical) to road traffic noise and NO₂ and risk for heart failure

Figure S1. Distribution of residential exposure to road traffic noise (a) and NO₂ (b) at time of enrolment into the cohort
