Traffic-Related Air Pollution and All-Cause Mortality during Tuberculosis Treatment in California

Robert J. Blount, Lisa Pascopella, Donald G. Catanzaro, Pennan Barry, Paul B. English, Mark R. Segal, Jennifer Flood, Dan Meltzer, Brenda Jones, John Balmes, and Payam Nahid

Table of Contents

Table S1: Unadjusted hazard ratios for mortality during TB treatment for selected predictors.

Table S2: Adjusted mortality hazard ratios (95% CI) for bilevel traffic density in each buffer, stratified by self-reported comorbidity, 2010-2012.

Table S3: Secondary outcome by nearest-road traffic volumes, 100 m buffer, Kaplan-Meier survival analysis.

Table S4: Adjusted mortality hazard ratios (95% CI) for nearest road traffic volumes, 100 m buffer, by Cox model.

Table S5: Adjusted mortality hazard ratios (95% CI) for highest quintile traffic density in each buffer, stratified by effect modifier level.

Figure S1: Kaplan-Meier survival analysis for Mycobacterium tuberculosis culture conversion (from positive to negative) by nearest-road traffic volume quintile in the 100 m buffer.

Figure S2: Kaplan-Meier survival analysis for successful TB treatment completion by nearest-road traffic volume quintile in the 100 m buffer.
