Supplemental Material

Randomized Trial of Interventions to Improve Childhood Asthma in Homes with Wood-burning Stoves

Table of Contents

Detailed description of interventions

Methods for determining asthma severity

Table S1. Characterization of asthma severity among participants according to 2007 NHLBI guidelines, based on frequency of each component.

Table S2. Pre- to post-intervention mean changes (95% CI) for treatments relative to placebo, adjusted for age, gender, baseline measures and ambient temperature (n = 114 subjects)

Table S3. Pre- to post-intervention changes for treatments relative to placebo, adjusted for age and gender, for primary subjects only (n = 97 subjects).
