Associations between Personal Care Product Use Patterns and Breast Cancer Risk among White and Black Women in the Sister Study

Kyla W. Taylor, Melissa A. Troester, Amy H. Herring, Lawrence S. Engel, Hazel B. Nichols, Dale P. Sandler, and Donna D. Baird

Table of Contents

Table S1: Full list of products assessed in questionnaire for each personal care product type (beauty, hair, and skin) with those remaining in analysis noted.

Table S2: Hazard ratios (HRs) and 95% confidence intervals (CIs) for the association between latent classes and breast cancer risk by ER status among post-menopausal white women.

Table S3: Hazard ratios (HRs) and 95% confidence intervals (CIs) for the association between latent classes and breast cancer risk, stratified by in situ or invasive events, among post-menopausal women white women.

Figure S1: Item-response probability conditional on class membership.
