Supplemental Material

Prenatal Exposure to Phthalates and the Development of Eczema Phenotypes in Male Children: Results from the EDEN Mother–Child Cohort Study

Munawar Hussain Soomro, Nour Baiz, Claire Philippat, Celine Vernet, Valerie Siroux, Cara Nichole Maesano, Shreosi Sanyal, Remy Slama, Carl-Gustaf Bornehag, and Isabella Annesi-Maesano

Table of Contents

**Figure S1.** Directed acyclic graph (DAG) for evaluation of covariate selection in the analysis of phthalates and eczema. Green nodes: Variables associated to phthalates levels, Blue nodes: Variables associated to eczema occurrence, Red nodes: Variables associated to phthalates and eczema outcomes.

**Table S1.** Spearman correlation between ln-transformed standardized urinary concentrations of phthalate metabolites.

**Table S2.** Association between maternal urinary concentrations of phthalate metabolites and occurrence of ever eczema in boys according to atopic status as assessed by Total IgE.
