Note to readers with disabilities: EHP strives to ensure that all journal content is accessible to all readers. However, some figures and Supplemental Material published in EHP articles may not conform to 508 standards due to the complexity of the information being presented. If you need assistance accessing journal content, please contact ehp508@niehs.nih.gov. Our staff will work with you to assess and meet your accessibility needs within 3 working days.

Supplemental Material

Estimating Acute Cardiovascular Effects of Ambient PM$_{2.5}$ Metals

Table of Contents

Table S1. Limits of detection (LOD) in ng/m$^3$ of PM$_{2.5}$ trace components measured at the Atlanta Jefferson Street monitoring site, and % of measurements below LOD, during 1998-2008 and 2008-2013.

Table S2a. Summary statistics of ambient air pollutants measured at the Atlanta Jefferson Street monitoring site during the warm season (May - October), 1998-2013 and 2008-2013.

Table S2b. Summary statistics of ambient air pollutants measured at the Atlanta Jefferson Street monitoring site during the cold season (November - April), 1998-2013 and 2008-2013.

Table S4a. Pearson correlations among pollutants during the warm season (May - October), 1998-2013 and 2008-2013.

Table S4b. Pearson correlations among pollutants during the cold season (November - April), 1998-2013 and 2008-2013.

Figure S1. Estimated associations between cardiovascular ED visits and tomorrow’s pollutant levels, 1998-2013 year-round analysis (3303 days).

Figure S2. Estimated associations between cardiovascular ED visits and tomorrow’s pollutant levels, 2008-2013 year-round analysis (628 days).

Figure S3. Estimated associations between cardiovascular ED visits and pollutants available during 1998-2013, year-round analysis including all days with data available for each pollutant.
**Figure S4.** Estimated associations between cardiovascular ED visits and pollutants available during 1998-2013, warm-season analysis including all days with data available for each pollutant.

**Figure S5.** Estimated associations between cardiovascular ED visits and pollutants available during 1998-2013, cold-season analysis including all days with data available for each pollutant.

**Figure S6.** Estimated associations between cardiovascular ED visits and pollutants only available during 2008-2013 and water-soluble Fe during 2008-2013, year-round analysis including all days with data available for each pollutant.
